| <b>CONFLICTED →<br/>RESOLVED</b><br><small>Canonical / Indexation Conflict</small> | <b>50.2 → &lt;30</b><br><small>Avg. Position (28-day GSC)</small> | <b>5 → 40–80*</b><br><small>Monthly Clicks (28-day)</small> | <b>2.19% → 4%+</b><br><small>CTR (US)</small> |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------|-------------------------------------------------------------|-----------------------------------------------|

\*Directional range, not an extrapolated trend — see “A Note on Realistic Timelines” at the end of this document.

### Why This Plan Looks Different From a Typical 30-Day Plan

Most 30-day SEO plans — including the one already running for your sister site, psychicrajsharma.com — are about squeezing more clicks out of pages Google already trusts and ranks: CTR fixes, content-depth upgrades, new pages targeting proven keyword gaps.

psychicjagan-nearme.com is earlier-stage than that. It's roughly one month old in Search Console (data begins June 9, 2026), and a code-level bug meant every core page had two competing URLs — a “.php” version and a clean version — with sitemap.xml, internal links, and canonical tags all disagreeing about which one was real. Google had already started indexing the wrong version for several pages, and 50 near-duplicate “services-in-{state}” pages were consuming crawl attention and internal link equity that should have gone to the 9 pages that actually generate calls and WhatsApp leads.

That structural conflict is what the last week of work fixed. Week 1 below is about confirming that fix is live in production and re-crawled — a code fix nobody's crawled yet doesn't move a single ranking. Weeks 2–4 build content, schema, and trust signals on top of a site that's now structurally sound.

### Baseline — Current State (Verified)

Source: Google Search Console “Performance on Search” export, psychicjagan-nearme.com, 28-day window ending July 6, 2026. Every figure below is read directly from that export or from direct code inspection — nothing here is estimated.

| Metric                                           | Value                                                                                                                                | Source                                                                                                                                                                                                           |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Total clicks (28 days)                           | 5                                                                                                                                    | GSC Performance                                                                                                                                                                                                  |
| Total impressions (28 days)                      | 190                                                                                                                                  | GSC Performance                                                                                                                                                                                                  |
| Average CTR (United States)                      | 2.19%                                                                                                                                | GSC Performance                                                                                                                                                                                                  |
| Average position (United States)                 | 50.23                                                                                                                                | GSC Performance                                                                                                                                                                                                  |
| Core service pages with any recorded impressions | 0 of 9                                                                                                                               | GSC Pages report — Black Magic Removal, Love Reading, Love Back Solution, Marriage Problem Solution, Love Marriage Solution, Psychic Reading, and Tarot Reading all showed zero impressions in the 28-day window |
| Pages already indexed & getting impressions      | Homepage + 22 of 50 state pages + several service pages indexed under the wrong .php URL                                             | GSC Pages report                                                                                                                                                                                                 |
| Schema coverage                                  | FAQPage on 12 of 19 templated pages · Review/AggregateRating on 0 pages · LocalBusiness/Person/Organization present on homepage only | Code audit                                                                                                                                                                                                       |

## Already Completed — July 9–10, 2026

| #  | Task                                                                                                                                                                                                                   | Status   |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 1  | Canonical URL conflict fixed sitewide — sitemap.xml, page canonicals, and internal nav links (header, footer, services-card) now consistently extensionless across 10 pages; .htaccess 301-redirects the old .php URLs | DONE     |
| 2  | /contact — was missing title tag, meta description, canonical, and head section entirely; full head + LocalBusiness schema added                                                                                       | DONE     |
| 3  | Homepage — added missing H1 (previously zero H1 tags anywhere on the assembled page)                                                                                                                                   | DONE     |
| 4  | Fixed a live PHP bug printing broken placeholder text in the FAQ section of all 50 state pages                                                                                                                         | DONE     |
| 5  | Added missing canonical tag to /articles                                                                                                                                                                               | DONE     |
| 6  | Added FAQPage schema to /faq (the one page missing it despite 12 others having it)                                                                                                                                     | DONE     |
| 7  | Bonus finding: /faq had the same “headless fragment” bug as /contact — fixed with its own head/body shell                                                                                                              | DONE     |
| 8  | Testimonials — removed unverifiable “Verified Review” label (none of the 7 had a real, linkable source); real reviews to be sourced in Week 3                                                                          | DONE     |
| 9  | Replaced the 50-state nav dropdown (present on every page, ~100 links/page) with one “Service Areas” hub link                                                                                                          | DONE     |
| 10 | Replaced hotlinked Pinterest hero image on state pages with a self-hosted image                                                                                                                                        | DONE     |
| 11 | Deleted ~9MB of unused legacy image files from the deployment                                                                                                                                                          | DONE     |
| 12 | Logo alt text/sizing — confirmed already correct sitewide, no change needed                                                                                                                                            | VERIFIED |
| 13 | Reviewed lazy-loading on 8 service-page hero images — confirmed already correctly optimized (fetchpriority=high); left unchanged to avoid regressing page speed                                                        | VERIFIED |
| 14 | Trimmed 5 page titles exceeding 60 characters                                                                                                                                                                          | DONE     |
| 15 | Expanded love-marriage-solution.php from ~160 words to full depth (process, FAQ+schema, trust signals, CTA) matching sibling pages                                                                                     | CONFIRM  |
| 16 | Consolidated duplicate inline CSS across all 9 service pages into one shared, cached stylesheet; fixed a class-name collision where 2 pages were incorrectly reusing another page's CSS prefix                         | CONFIRM  |

Items marked *CONFIRM* were approved and in progress as of this document's preparation — verify both are complete and deployed before starting Week 1, Task 1.

## Week 1 (Days 1–7) — Confirm & Deploy

Goal: everything above needs to be live in production — not just a working copy — and re-crawled. This week has no new content; it's making sure the fixes actually count.

| # | Task                                                                                                                                                                        | Priority | Day     |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|---------|
| 1 | Confirm items 15–16 above are complete; run php -l on all touched files                                                                                                     | HIGH     | Day 1   |
| 2 | Deploy all changes to the live production site (confirm this wasn't only verified in a local/XAMPP environment)                                                             | HIGH     | Day 1–2 |
| 3 | Spot-check 5 live URLs — homepage, /contact, /black-magic-removal, /faq, one services-in-state page — confirm single canonical, no duplicate .php URL resolving, H1 present | HIGH     | Day 2   |
| 4 | Resubmit sitemap.xml in GSC (Sitemaps → remove old → submit fresh)                                                                                                          | HIGH     | Day 2   |
| 5 | Request indexing via GSC URL Inspection for: homepage, all 9 service pages, /contact, /about-us, /articles, /faq                                                            | HIGH     | Day 2–3 |

| # | Task                                                                                                                                           | Priority | Day   |
|---|------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------|
| 6 | Verify Google Business Profile is claimed & verified, and NAP matches astrologer-data.php exactly (1200 SE 17th St, Fort Lauderdale, FL 33309) | HIGH     | Day 3 |
| 7 | Check GSC Coverage report for crawl/indexing errors on the corrected URLs                                                                      | MEDIUM   | Day 5 |
| 8 | Save the July 8, 2026 GSC export as the “Month 0” baseline for Week 4 comparison                                                               | MEDIUM   | Day 1 |

## Week 2 (Days 8–14) — Target the Keywords Already Showing Signal

Goal: GSC already shows two realistic near-term opportunities and one cluster that's partially working. Prioritize those over guessing at new keywords.

### Keyword Opportunities — From Your Own GSC Data

| Keyword / Cluster                                                                                    | Impr. (28d)             | Position   | Opportunity                                                                                             | Action                                                                                                                                        |
|------------------------------------------------------------------------------------------------------|-------------------------|------------|---------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| astrologer near me                                                                                   | 13                      | 10.46      | Borderline page 1 — the single highest-value keyword in the account right now                           | Strengthen homepage relevance for this exact phrase (new H1 area, about-astrologer section) — don't build a new page, this is homepage intent |
| astrology near me                                                                                    | 5                       | 16.6       | Page 2, same intent cluster as above                                                                    | Covered by the same homepage fix — no separate page needed                                                                                    |
| astrologer in 8 states (IL, NC, CO, WA, WI, PA, MD, NY)                                              | 6–17 each (79 combined) | 35–68      | The only 8 of 50 state pages already getting found — proof the format works, just not the content depth | Differentiate these 8 first before touching the other 42                                                                                      |
| “near me” long-tail cluster (tarot reader near me, psychic near me, etc.)                            | 1 each                  | 1*         | *GSC shows position 1, but only 1 impression each — too small a sample to be a reliable signal yet      | Don't build new pages chasing these yet. tarot-reading.php and psychic-reading.php already exist as landing pages if volume grows             |
| Core money terms (black magic removal, love back, marriage problem, love reading, spiritual healing) | 0                       | not ranked | Zero impressions — direct result of the canonical conflict just fixed                                   | No new content needed. Priority is Week 1's re-indexing; re-measure in Week 4                                                                 |

### Week 2 Tasks

| #  | Task                                                                                                                                                       | Priority | Day       |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-----------|
| 9  | Naturally add “astrologer near me” / “astrology near me” phrasing to the homepage H1 area and about-astrologer.php section — one mention each, no stuffing | HIGH     | Day 8     |
| 10 | Rewrite services-in-illinois with 300+ words of unique local content (largest of the 8 already-indexed states by impressions)                              | HIGH     | Day 9     |
| 11 | Rewrite services-in-north-carolina, services-in-colorado, services-in-washington with unique content                                                       | HIGH     | Day 10–11 |
| 12 | Rewrite services-in-wisconsin, services-in-pennsylvania, services-in-maryland, services-in-new-york with unique content                                    | HIGH     | Day 12–13 |
| 13 | Hold Review/AggregateRating schema until real reviews are sourced (Week 3) — do not fabricate rating data                                                  | MEDIUM   | Day 14    |

## Week 3 (Days 15–21) — E-E-A-T & Local Trust Signals

Goal: none of this requires new pages. It's the trust layer Google — and actual visitors — look for on sensitive-topic content like this.

| #  | Task                                                                                                                                                  | Priority | Day    |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|
| 14 | Ask 5+ past clients directly (phone/WhatsApp) for a Google Business Profile review, with a direct review link                                         | HIGH     | Day 15 |
| 15 | Once 3+ real reviews exist, add them to testimonials.php linked to their source, and add Review/AggregateRating schema                                | HIGH     | Day 17 |
| 16 | Add a real photo and credentials/background copy to About Us — use the existing 28+ years experience field as the anchor rather than generic claims   | HIGH     | Day 17 |
| 17 | Fully complete Google Business Profile: verified hours, full services list, 10+ photos, business description matching the site's service list exactly | HIGH     | Day 18 |
| 18 | First GBP weekly post (e.g. Black Magic Removal service)                                                                                              | MEDIUM   | Day 19 |
| 19 | Submit to 8–10 relevant directories with exactly matching NAP — general (Yelp, BBB, Foursquare) plus 2–3 astrology/psychic-specific directories       | MEDIUM   | Day 20 |
| 20 | Differentiate the next batch of state pages, prioritizing Florida-adjacent states (GA, SC, AL, TN) given the business's Fort Lauderdale base          | MEDIUM   | Day 21 |

## Week 4 (Days 22–30) — Measure & Plan Month 2

| #  | Task                                                                                                                                                          | Priority | Day    |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|
| 21 | Second GBP weekly post                                                                                                                                        | MEDIUM   | Day 24 |
| 22 | Pull a fresh 28-day GSC export and compare directly against the July 8 “Month 0” baseline                                                                     | HIGH     | Day 28 |
| 23 | Check GSC Coverage: confirm .php URLs no longer appear in the Pages report — the clearest sign the canonical fix consolidated correctly                       | HIGH     | Day 28 |
| 24 | Check whether any of the 9 core service pages show impressions for the first time                                                                             | HIGH     | Day 28 |
| 25 | Check position movement on “astrologer near me” / “astrology near me”                                                                                         | MEDIUM   | Day 29 |
| 26 | Plan Month 2 from Week 4's actual data — next state pages to differentiate, next service page needing content depth, whether a blog cadence is worth starting | MEDIUM   | Day 30 |

## GSC Actions Required This Month

| When    | Action                                                   | How to Do It                                        |
|---------|----------------------------------------------------------|-----------------------------------------------------|
| Day 2   | Resubmit sitemap.xml                                     | GSC → Sitemaps → remove old → submit fresh          |
| Day 2–3 | Request indexing on ~13 corrected URLs                   | GSC → URL Inspection → paste URL → Request Indexing |
| Day 5   | Check Coverage report for errors                         | GSC → Indexing → Pages → filter Errors              |
| Week 2  | Monitor whether .php URLs drop out of the Pages report   | GSC → Performance → Pages                           |
| Week 4  | Export and compare 28-day performance vs. Jul 8 baseline | GSC → Performance → Export                          |
| Week 4  | Check query-level position movement                      | GSC → Performance → Queries → sort by Position      |

## 30-Day Scorecard

| Category                    | Current (Verified)                                                                                             | 30-Day Target                                                                | Key Actions              |
|-----------------------------|----------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|--------------------------|
| Indexation Integrity        | Canonical conflict on 10+ pages — just resolved, not yet reflected in the index                                | 0 pages with conflicting canonicals; .php URLs no longer indexed             | Week 1                   |
| Schema Coverage             | FAQPage 12/19 · Review 0/1 · Local/Contact schema 1/19                                                         | FAQPage 19/19 · Review added once real reviews exist · Local schema 3+ pages | Week 1–3                 |
| Unique State-Page Content   | 0 of 50 differentiated                                                                                         | 8–18 of 50 (the ones already getting impressions, prioritized first)         | Week 2–3                 |
| Monthly Clicks (28-day GSC) | 5                                                                                                              | 40–80 (directional)                                                          | All weeks                |
| Average Position            | 50.23                                                                                                          | Under 30                                                                     | Indexation fix + content |
| E-E-A-T Signals             | Foundational — no sourced reviews yet, About page has raw data but no story/photo, GBP completeness unverified | Developing — 3+ real reviews live, About page rewritten, GBP complete        | Week 3                   |
| Local Citations             | Not audited this session                                                                                       | 8–10 directories submitted with matching NAP                                 | Week 3                   |

*Category assessments above are based on direct code and GSC verification, not a third-party audit tool. Softer categories (E-E-A-T, Local Citations) don't have a meaningful 0–100 scale without external data this review didn't have access to, so they're tracked as maturity stages rather than an invented numeric score.*

## A Note on Realistic Timelines

The two biggest swings on this plan — core service pages moving from 0 impressions to measurable visibility, and average position moving from 50 to under 30 — depend on how quickly Google re-crawls and consolidates the canonical signal. That's typically 1–4 weeks after resubmission, not immediate.

If the Week 4 export doesn't yet show the full effect, that's expected and not a sign anything failed. The signal to watch for is directional movement — some service pages showing impressions for the first time, .php URLs disappearing from the Pages report, position numbers trending down — not a guaranteed jump to the target numbers within exactly 30 days. This is a one-month-old site; the honest comparison point is where it stood on July 8, not an established competitor's numbers.
